

OpenPoint Field Activities

Manage inspections and maintenance of assets using mobile tools in the field

Pole inspections ♦ Hydrant flushing ♦ Valve turns ♦ Cross connections ♦ Custom activities

Inspect and Maintain Assets

Keep your system assets in good working order and meet regulatory requirements with highly efficient scheduling and tracking tools that work on your mobile devices in the field.

- Schedule recurring maintenance/inspection tasks
- Separate assets into visual zones on your map
- Define work route to maximize efficiency
- Create customized data collection forms
- View dashboard to highlight project status
- Assign individuals or teams to projects
- Perform simple bulk map updates of field activities / work efforts
- Apply predefined asset activity types or create your own

Optimized Tools

Use OpenPoint's best of breed tools to optimize your asset maintenance and inspection work efforts including full integration with Esri's ArcGIS platform and OpenPoint's full suite of utility software modules.

- Manage electric, water and wastewater inspections and maintenance
- Automatically generate maps for field work
- Enjoy seamless integration with OpenPoint Map
- Customize field map styling
- Use advanced searching capabilities
- Report on upcoming and historical activities
- Add photos and documents in the field
- Activity examples: pole inspections, hydrant flushing, hydrant painting, valve turns, cross connection inspections and much more
